

What is NodeOps?

NodeOps is the leading infrastructure marketplace for Web3, allowing anyone to purchase, deploy and manage a wide range of blockchain nodes. We are streamlining the entire node orchestration process and offer an easy-to-use platform for Web3 protocols, developers and retail users to manage all their operational needs. With Atlas—our permissionless, decentralised infrastructure orchestration layer built as an AVS on EigenLayer—we're setting new standards in ease, speed, and security for infrastructure management.

Mission

Our mission is to truly decentralize Web3. One node at a time. We offer simple, accessible solutions paired with the best possible user experience, enabling anyone to actively participate in Web3's decentralization. In doing so, we transform individual users into vital parts of the blockchain ecosystem, strengthening its resilience and laying the foundation for a thriving future.

Vision

We envision a future where Web3 is fully decentralized, resilient, and inclusive—a future where NodeOps serves as one-stop-shop for all Web3 infrastructure and economic security needs, accessible to anyone.

Products

NodeConsole

Seamless one-click node deployment and management for anyone

NodePad

Governance-driven, user-friendly node launchpad

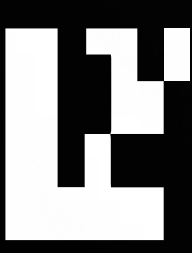

Atlas

NodeOps' permissionless, decentralised infrastructure orchestration layer, built as an AVS on EigenLayer

Why NodeOps?

Permissionless Infrastructure | One-Click Deployment | Scalable Architecture | Immediate Upgrades | Continuous Monitoring
24/7 Support | 99.9% Uptime | Decentralized Verifiable SaaS (Atlas AVS)

What They Are Saying

Sandeep Nailwal

Polygon

🐦 @sandeepnailwal

NodeOps is transforming blockchain infrastructure with its scalable, AI-driven, and permissionless solution, perfectly aligning with decentralization & inclusivity principles.

Daniel Wang

Aethir

🐦 @0x5tryker

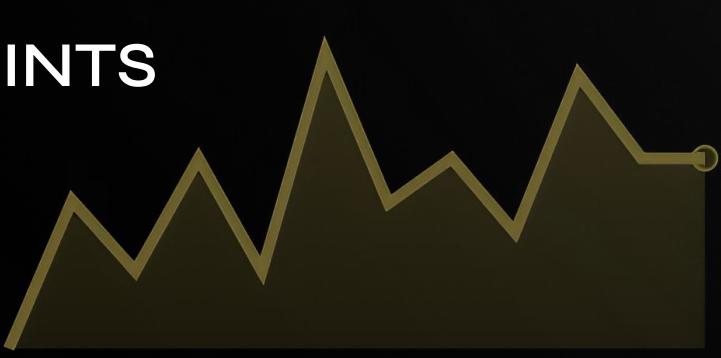

NodeOps has revolutionized node infrastructure in the Aethir ecosystem, consistently delivering exceptional user experience and support, and solidifying their leadership in decentralized infrastructure.
